

# Power & Productivity

## Fusing IBM Power with Microsoft Productivity

When using a mix of disparate technologies you introduce silos that impair users and impede business efficiency. By fusing your powerful IBM i systems with Microsoft tools you can produce composite applications that increase user productivity and improve operational efficiency.

iFusion.net is a software platform that combines IBM and Microsoft technologies to form a unified architecture. The design is a fusion of your tailor-made legacy systems with Microsoft solutions like Office, SharePoint and SQL Server, or .NET applications.

A fused environment allows new applications to be delivered faster, and at a lower cost, by using existing skills and resources.

**Stop mixing and start fusing – [www.iFusion.net](http://www.iFusion.net)**
